Radiotherapy

Radiotherapy is the use of high energy X-rays to treat malignant disease.

The Northern Centre for Cancer Care is a large regional department and has a wide range of staff working together to provide an excellent patient pathway

- ❖ **Oncology Consultants** – Patient consent, treatment prescribing and
- ❖ **Therapeutic Radiographers** – Pre-treatment scanning, treatment delivery and patient care
- ❖ **Dosimetrists** – Treatment planning
- ❖ **Mould Room** – Immobilisation devices
- ❖ **Clinical Scientists** – Implementation, maintenance, and development of radiotherapy systems
- ❖ **Clinical Engineering** – Linear accelerator maintenance and servicing

Radiotherapy offers a combination of science, technology, research and patient care. Working with advancing technology allows professionals continual skill enhancement and development
